PROFILE

Founder and full stack developer working at the intersection of engineering craft and visual design. Over the last six years I've shipped social platforms, commerce experiences, dashboards and brand systems for startups and student communities across Africa. I care about the details most people never notice — easing curves, optical spacing, type rhythm, first paint speed — and treat accessibility and performance as part of the design, not an afterthought.

FEATURED PROJECT

UniConnect — Campus Social Network

A university social platform connecting students through communities, messaging, announcements, networking and collaboration. Gives every faculty, club and study group its own space with realtime messaging, verified announcements, an events feed and a networking layer that matches students by course, skill and interest. Built for slow campus networks — ships under 100kb of critical JS and works offline-first for the feed.

12,000+ student accounts • 99.9% uptime since launch • Realtime messaging & presence

Next.js · TypeScript · Tailwind CSS · Node.js · PostgreSQL · Supabase · Cloudinary · Render

EXPERIENCE

Founder & Product Engineer2024 — Present

UniConnect

Leading product, design and engineering for a campus social network serving 40,000+ students.

• Own the full stack — from Figma prototypes to production deploys on Render and Vercel

• Built realtime messaging, presence and role-based moderation tooling from the ground up

• Optimized for low-bandwidth campus networks with an offline-first, sub-100kb critical path

Senior Frontend Engineer2023 — 2024

Nimbus Studio

Full Stack Developer2021 — 2023

Freelance

Graphic & Brand Designer2019 — 2021

Independent

CORE SERVICES

Full Stack Development · UI/UX Design · Brand Identity · Logo Design · Web Applications

Mobile Apps (PWA / React Native) · Graphics Design · Product Consulting
